

Abstract

This present invention details slow-release natural and safe compositions for use in repelling clothes moths and other insects from all types of closed storage units. Specifically, the compositions contain a blend of Generally Regarded as Safe (GRAS) essential oils and some of their active ingredients, used currently as food additives including but not limited to, geranium oil, rosemary oil, peppermint oil, mint oil, citronella oil, thyme oil, cinnamon oil, geraniol, and eugenol. More specifically, the compositions further contain citric acid and acetic acid, all applied to a substrate.
